A CRM APPLICATION FOR THE CHAI SHOP & CO.

1.1 Problem Identification

The Chai Shop & Co. may face difficulties in managing customer information, orders, feedback, and customer relationships through manual records or separate files. Customer details and purchase history may not be organized properly, which can make it difficult to provide personalized service and track customer preferences. The project identifies the need for a centralized CRM application that can organize customer, order, feedback, and interaction information in one system.

1.2 Problem Statements

ID	Target User	Problem Statement
PS-1	Customer	The customer wants quick and personalized service, but the shop may not have organized customer information and purchase history.
PS-2	Shop Manager	The Shop Manager wants to monitor customers, orders, and sales, but scattered records can make tracking and reporting difficult.
PS-3	Staff	The staff wants to manage customer orders efficiently, but manual entry and repeated work can cause delays and errors.
PS-4	System Administrator	The System Administrator wants to manage user access and CRM data securely, but manual access control can create risks of unauthorized access.

1.3 Target Users

- Customers
- Shop Managers
- Shop Staff
- System Administrators

1.4 Empathy Map

Empathy Area	CRM Understanding

Think & Feel	Users need quick service, accurate information, easy order management, and a better customer experience.
Hear	Users receive feedback and suggestions from customers, staff members, and shop management.
See	Users currently see order records, customer details, bills,
	feedback, and other information maintained through manual or separate records.
Say & Do	Staff members enter customer and order information, while managers monitor customer relationships, orders, and business activities.
Pain	Data-entry errors, missing customer information, repeated work, delays, and difficulty preparing reports.
Gain	Centralized customer information, faster service, organized records, better customer engagement, and easier reporting.

1.5 User Needs

- Simple customer data entry and record maintenance.
- Accurate customer and order information.
- Easy tracking of customer preferences and purchase history.
- Efficient management of customer orders and interactions.
- Controlled access for different user roles.
- Reports and dashboards for quick decision-making.
- Better customer service and relationship management.

1.6 Pain Points

- Manual paperwork and repeated data entry.
- Risk of incorrect or missing customer records.
- Customer information scattered across different files.
- Difficulty tracking customer preferences and purchase history.
- Delayed preparation of customer and sales reports.
- Difficulty controlling access to CRM information.
- Limited visibility into customer activity and business performance.

1.7 Selected Idea

The selected idea is a CRM-based application for The Chai Shop & Co. The system centralizes customer, order, feedback, interaction, and related business information in one platform. It provides

structured data management, validation, access control, reports, and dashboards to improve customer relationship management and shop operations.

1.8 Objective of the Idea

The objective is to develop a centralized and user-friendly CRM application that reduces manual work, improves customer data accuracy, supports role-based access, enables efficient order and customer management, provides faster reporting, and improves the overall customer experience at The Chai Shop & Co.

1.9 Expected Outcome

The proposed CRM application is expected to provide organized digital customer records, better data accuracy, efficient order management, improved customer interaction, faster reporting, better monitoring of customer activities, and a reliable foundation for future CRM automation.
