A CRM APPLICATION FOR THE CHAI SHOP & CO

5. PROJECT DEVELOPMENT PHASE

5.1 Development Environment

The Chai Shop & Co. CRM application is developed on a Salesforce Developer Organization using Salesforce Lightning. The implementation uses custom objects, custom fields, relationships, validation, security configuration, reports and dashboards.

5.2 Custom Objects

Object	Record Name	Purpose
Customer	Customer Name (Text)	Stores customer identity, contact and preference information.
Order	Order Number (Auto Number)	Stores order details, quantities, status and customer order information.
Feedback	Feedback ID (Auto Number)	Stores customer feedback, ratings and comments.
Interaction	Interaction ID (Auto Number)	Stores customer interaction details, type and service history.

5.3 Customer Object Fields

Field	Type / Values
Customer Name	Text
Contact Number	Phone
Email	Email
Address	Text Area
Preferred Chai	Picklist: Tea, Coffee, Snacks, Other
Customer Type	Picklist: Regular, New, Business

5.4 Order Object Fields

Field	Type / Details
Order Number	Auto Number
Order Date	Date
Quantity	Number
Total Amount	Currency
Order Status	Picklist: Pending, Confirmed, Completed, Cancelled
Customer	Lookup relationship to Customer

Order Type	Picklist: Dine-in, Takeaway, Delivery

5.5 Feedback Object Fields

Field	Type / Details
Feedback Date	Date
Rating	Number
Comments	Long Text Area
Customer	Lookup relationship to Customer

5.6 Interaction Object Fields

Field	Type / Details
Interaction Date	Date
Interaction Type	Picklist: Call, Visit, WhatsApp, Other
Notes	Long Text Area
Customer	Lookup relationship to Customer

5.7 Lightning App

A Salesforce Lightning application named “Chai Shop & Co CRM” is configured with the Customer, Order, Feedback, Interaction, Reports and Dashboards tabs. The application is assigned for use by the System Administrator.

5.8 Security and Access Configuration

- Shop Staff and Shop Manager profiles are configured to provide role-based access to CRM records.
- A Shop Manager role is placed under the System Administrator hierarchy.
- Shop Staff users are configured with the required Salesforce user license and CRM access.
- Criteria-based sharing rules provide appropriate Read/Write access to Customer and Order records when the defined criteria are met.
- Feedback and Interaction records are shared according to the configured roles and access requirements.

5.9 Development Summary

The development phase converts the planned CRM design into a working Salesforce application with structured customer, order, feedback and interaction objects, fields, relationships, validation and

controlled access. Reports and dashboards provide the analytics layer needed for customer activity, order tracking and sales-related monitoring.
