A CRM APPLICATION FOR THE CHAI SHOP & CO

8. PROJECT DEMONSTRATION

8.1 Demonstration Objective

The demonstration shows the main working flow of the CRM Application for The Chai Shop & Co. in Salesforce, from creating customer and order records to entering feedback and interaction details and viewing reports and dashboards.

8.2 Demonstration Prerequisites

- Salesforce account with access to the "Chai Shop & Co CRM" application.
- Required user permissions.
- Customer, Order, Feedback and Interaction tabs available in the application.
- Reports and Dashboards configured.

8.3 Demonstration Steps

Step	Demonstration Activity
Step 1	Open the App Launcher and select the "Chai Shop & Co CRM" Lightning application.
Step 2	Open the Customer tab, select New, enter Customer Name, Contact Number, Email, Address, Preferred Chai and Customer Type, and save the record.
Step 3	Open the Order tab, create an order, enter Order Date, Quantity, Total Amount, Order Status and Order Type, and link the order to the appropriate Customer.
Step 4	Open the Feedback tab, enter Feedback Date, Rating and Comments, and link the feedback record to the appropriate Customer.
Step 5	Open the Interaction tab and enter Interaction Date, Interaction Type and Notes, then link the interaction to the appropriate Customer.
Step 6	Open Reports and display reports containing Customer, Order, Feedback and Interaction information.
Step 7	Open Dashboards and display CRM analytics such as customer activity, order tracking and sales-related information.

8.4 Expected Demonstration Result

The demonstration should show that users can create and connect the main CRM records, apply configured data rules, view customer and order information and access reports and dashboards through the Chai Shop & Co CRM application.

8.5 Final Demonstration Checklist

- Application opens successfully.
- Customer record can be created.
- Order record can be created and linked to a Customer.
- Feedback record can be created and linked to a Customer.
- Interaction record can be created and linked to a Customer.
- Required field and validation rules work according to configuration.
- Reports display customer, order, feedback and interaction information.
- Dashboards display CRM analytics.
- Access permissions work according to configuration.

8.6 Demonstration Conclusion

The final demonstration presents the complete functional flow of the CRM Application for The Chai Shop & Co. and shows how Salesforce objects, relationships, validation, security, reports and dashboards work together to support customer and business management.
